Hodson Computerized Analysis of Phonological Patterns [HCAPP]
Barbara Williams Hodson

HCAPP is an efficient evaluation tool for speech-language pathologists. The HCAPP provides a quick way to score Phonological Deviations for HAPP-3 words. Data can be stored for future retrieval and ease in documenting the child's progress.

Phonetic symbols representing the child's productions of 50 words can be entered into the computer in approximately 5 minutes (depending on the child's level of severity).

A simple click of the RESULTS button scores the utterances for phonological deviations. An easy-to-read Phonological Analysis Summary provides:

- **Total Occurrences and Percentage-of-Occurrence** scores for Major Phonological Deviations
- **Severity Rating** specification for the child's phonological system [Mild, Moderate, Severe, Profound]
- **Goal Statement** specifying optimal potential target patterns for a highly unintelligible child

The HCAPP kit contains one copy-protected CD. The User Guide and the Transcription Recording Form, which are on the CD, need to be printed off and read/reviewed before inputting data. It is important to note that there are several asterisks on the HCAPP printout. These refer to specific information in the User Guide.

The cost is \$130 [US Dollars] per kit.
Kansas residents add sales tax unless a copy of your organization's tax exempt certificate is enclosed.

PhonoComp Software Company warrants *HCAPP* to be free from defects in material and faulty workmanship under normal use for a period of 90 days. If the purchaser is not satisfied, the *HCAPP* kit may be returned in its original condition along with a letter of explanation within 30 days of the invoice date for a full refund of the purchase price. In addition, a replacement CD for damaged *HCAPP* software may be obtained by returning the CD along with an explanation letter and a check for \$25. [Return postage is the purchaser's responsibility.]
